

Description

Egide manufactures a full range of hermetic headers designed to meet the harsh environmental conditions and high reliability standards under which relays, circuit breakers, ... are used in a number of industrial, avionics, off-shore, transport and military markets. These headers benefit from the company's know-how in glass to metal seal technology. A variety of terminal materials as well as pin end configurations is available.

Our technical support service centre enables a quick turnaround time for any custom design.

Features

- Hermeticity : 1.10^{-8} cm³/s atm He
- Possible terminal materials: 52 alloy, 52 alloy Cu core,
- Various pin end configurations: square cut, full radius, hook, ...
- Glass – to – metal – seal technology
- Different form factors & designs
- Rapid turn around time for custom design
- Electrolytic Ni plating, with optional selective Au plating
